

# URBANISM NEXT | CONFERENCE

MAY 7, 2019 | PORTLAND, OR

## ONE-DAY WORKSHOP | HOW NEW MOBILITY, AUTONOMOUS VEHICLES, E-COMMERCE, AND THE SHARING ECONOMY IMPACT CITIES

*An Urbanism Next Workshop for Elected Officials and Government Leaders*

The way people get around their communities, shop for clothes, and order delivery is radically different from how people did those things a decade ago. Rapid technological advances in the areas of automation, new mobility, e-commerce, and the sharing economy are behind these behavioral shifts. This all-day workshop is designed to help decision makers understand how these emerging technologies impact land use, transportation, urban design, and real estate. Government leaders need to understand the challenges and opportunities that these technologies could bring so they can harness them to achieve community goals around equity, health, the economy, and the environment. This workshop will help decision makers understand the issues surrounding emerging technologies, the questions they need to ask, the stakeholders they need to engage, and the steps they need to take to ensure that this technology helps them build the communities they want to live in.

# THE URBANISM NEXT CONFERENCE | MAY 7-9, 2019

The Urbanism Next Center at the University of Oregon has partnered with the National and Oregon Chapters of the American Planning Association, the American Institute of Architects, the American Society of Landscape Architects, and the Urban Land Institute Northwest to build a national network of thought leaders. We are bringing these leaders and others interested in these topics from around the world to Portland, OR for the second annual Urbanism Next Conference. **This conference will bring together a truly interdisciplinary group of people from the private, public, and academic sectors who play a critical role in the future of our cities.** The conference will explore major themes of how technology related to AVs, the sharing economy, and E-commerce will change our communities: **land use, urban design, transportation, and real estate, and the implications these changes have for equity, health, the environment, the economy, and governance.**
